Varicose vein surgery versus foam sclereotherapy to prevent extension of venous reflux with time

Published On: February 25, 2020 | Pages: 008 - 010

Author(s): Fatih Islamoglu*

In the treatment of Chronic Venous Insufficiency (CVI) High Ligation (HL) and stripping of the saphenous varicose veins, and percutaneous phlebectomy have been the main options for many years. Modern management of CVI includes treatment of the cause (reflux) and result (varicose veins). Reflux should be treated before varicosities because if the cause is not eliminate ...

Duplex ultrasound in upper and lower limb deep venous thrombosis

Published On: February 12, 2020 | Pages: 001 - 007

Author(s): Tsongo V Sosthène*, Kahatwa K Serge, Kabuyaya K Medard, Kighoma V Simplice, Musubao K John and Serugendo S Albin

Duplex ultrasound involves B-mode and Doppler ultrasound. Duplex ultrasonography is a radiological examination requested by clinicians in patients with symptoms of deep venous thrombosis such as upper or lower limb swelling, pain and tenderness. Deep venous thrombosis is a pathology in which clot formation causes obstruction of blood flow. ...
