Multimodal Sampling in Robotic Bronchoscopy: A Retrospective Comparative Analysis of Diagnostic Performance Using IONGuided FNA, Surgical Biopsy, and ROSE/Frozen Section in Lung Lesions

Published On: December 31, 2025 | Pages: 001 - 006

Author(s): Jennifer Lee*, Xuemo Fan and Shikha Bose

Background: Robotic-assisted bronchoscopy using the Ion™ Endoluminal Platform (ION) has emerged as a promising tool for diagnosing peripheral lung lesions. However, the comparative diagnostic performance of fine needle aspiration (FNA), surgical biopsy (SB), and their combination within this context remains underexplored. Methods: We conducted a retrospective review ...
