Correlation between job burnout and Fear of COVID-19 among ICU and CCU Nurses (Case study: Shahid Madani Cardiac Hospital, Tabriz, Iran)

Published On: December 14, 2021 | Pages: 024 - 028

Author(s): Fatemeh Golabi, Mohammad Bagher Alizadeh Aghdam, Hamed Akbarian* and Mir Mojtaba Hosseini Mazraehshadi

Background: Occupational burnout among nurses is one of the major factors which affect the quality of nursing care. Assessing the relationship between burnout and its associated factors is one of the most basic things that should be done so that later, actions can be taken to reduce burnout. Fear of COVID-19 is one of the factors that can increase the burnout of nurse ...

Can newborn screening be cost benefit procedure if preventing serious complications of cystic fibrosis?

Published On: December 03, 2021 | Pages: 020 - 023

Author(s): Mirna Šubat-Dežulovi, Gordana Peli*, Ana Valkovi, Sanja Flajšman-Raspor, Goran Peli and Anamarija Gjuran Coha

Cystic Fibrosis (CF) is a common inherited disease with reported mean prevalence of 0.737/10,000 in 27 EU countries

(Farrell J Cyst Fibros. 2008). Still, many EU countries have not implemented CF in the Newborn Screening (NBS) programme, including our country. We report the case of a 7-month-old boy whose presenting signs of CF were life-threatening neurological symp ...
