Septic Arthritis: The drainage controversy

Published On: September 24, 2018 | Pages: 001 - 005

Author(s): de Jong PH*, Bisoendial RJ and Lems WF

Objective: Septic arthritis is a relatively rare disease, which is associated with a high morbidity and mortality. Treatment consists of prolonged antibiotic therapy and removal of intra-articular inflammatory debris. However, there is much controversy about the most effective drainage method. Therefore, we compared the clinical efficacy of (daily) needle aspiration w ...
